BLOCKCHAIN ARCHITECT · SMART CONTRACT ENGINEER · TECHNICAL LEAD

SUMMARY

Blockchain architect and full-stack Web3 engineer with 10+ years building decentralized systems, smart contracts, DAO governance infrastructure, and production crypto products. Led protocol and product development across organizations managing 100M+ in assets, shipped audited Solidity systems without critical incidents, and built end-to-end applications spanning frontend, backend, contracts, and developer tooling. Founding member and technical leader at DXdao and Winding Tree.

EXPERIENCE

Founder *Openscan*   Dec 2025 – Present

• Founded and built an open-source, trustless multi-chain blockchain explorer for Bitcoin, Ethereum, and major L2s including Arbitrum, Optimism, Base, Polygon, and BNB Chain.
• Architected a fully client-side explorer that connects directly to blockchain RPC endpoints, removing centralized intermediaries and improving verifiability and censorship resistance.
• Built contract interaction features, developer tooling, and network integrations using TypeScript, Bun, Vite, and modern Web3 tooling.

Technical Lead *DXdao*   Mar 2020 – Apr 2023

• Led development of decentralized governance infrastructure supporting 100M+ in DAO-managed assets.
• Designed, reviewed, and deployed smart contracts with zero critical vulnerabilities across production systems.
• Led development of Swapr, a Uniswap V2 fork with governance-driven product improvements.
• Coordinated a distributed team of 20 contributors across 5 countries and helped organize the Devcon 2022 hackathon for 200+ participants.

Founder & Blockchain Architect *Winding Tree*   Nov 2016 – Jun 2018

• Designed the blockchain architecture for a decentralized travel marketplace and led protocol design, smart contract development, and technical strategy.
• Helped support a 20M token sale in 2017, including investor-protection validation mechanisms and production blockchain infrastructure.
• Drove technical partnerships and integrations with major travel-industry partners.

Smart Contract Specialist *LevelK*   Jun 2018 – Apr 2019

• Performed Solidity security audits, threat modeling, and code review processes for Ethereum-based applications deployed to production.

Earlier Roles   2013 – 2017

Full Stack Blockchain Developer, CoinFabrik · Ethereum Developer / Consultant, CrowdJury · Front End Developer, Ambisafe · Full Stack Developer, incorporations.io · QA Analyst, Devspark / Discovery Communications

SELECTED PROJECTS

FlashLender — Open-source ERC-20 flash loan platform for lending and yield generation. Built with Solidity, Hardhat, and TypeScript. github.com/AugustoL/erc20-flash-lender

AlohaToken — End-to-end dApp that rewards real surf sessions with on-chain tokens, including smart contracts, web app, and signature server.
github.com/AugustoL/AlohaToken

SKILLS

Solidity, Hardhat, Ethers.js, TypeScript, JavaScript, Node.js, Next.js, Vite, Bun, Postgres, Redis, IPFS, GraphQL, REST APIs, DAO governance, DeFi protocols, smart contract security, protocol architecture, technical leadership, distributed team management

EDUCATION

Programming Technician   2009 – 2013
Faculty of Exact Sciences, UNICEN

ACHIEVEMENTS

• Co-founded and helped scale a DAO with 100M+ in managed assets.
• Contributor to the Ethereum ecosystem, including ERC-827 and top-50 GitPOAP contributor ranking.
• Speaker and educator who has onboarded hundreds of people into blockchain since 2015.
